A photograph of a large, multi-story building with a red roof and white walls, illuminated at night. The building is situated on a hillside overlooking a body of water. The lights from the building and surrounding area are reflected in the water. In the background, a tall, white tower with a green dome is visible against the dark sky.

Unexpected Connections in Physics: From Superconductors to Black Holes

Talk online: sachdev.physics.harvard.edu

**The main unsolved problem in
theoretical physics today:**

The main unsolved problem in
theoretical physics today:
Unification of

Quantum theory of
electrons, protons, neutron,
atoms, molecules..

The main unsolved problem in
theoretical physics today:
Unification of

Quantum theory of
electrons, protons, neutron,
atoms, molecules..

and

Einstein's theory of General Relativity
(gravitation) applied to stars, black
holes, galaxies, the universe....

Work over the past 20+ years has finally led to a candidate theory which unifies gravitation and the quantum theory, and which is internally consistent.

Work over the past 20+ years has finally led to a candidate theory which unifies gravitation and the quantum theory, and which is internally consistent.

This theory is popularly known as "string theory"

Work over the past 20+ years has finally led to a candidate theory which unifies gravitation and the quantum theory, and which is internally consistent.

This theory is popularly known as "string theory"

We do not know yet if string theory is the correct description of our universe.

The deepest new principle of physics
to emerge from string theory is

The deepest new principle of physics
to emerge from string theory is the
equivalence between

the quantum theory of
gravity in 3 space dimensions

The deepest new principle of physics to emerge from string theory is the equivalence between

the quantum theory of gravity in 3 space dimensions

and

a theory of special quantum states of matter (electron, photons, quarks..) without gravity in 2 space dimensions

3-dimensional quantum gravity can be represented as a "hologram" in 2 dimensions

This equivalence has led to:

This equivalence has led to:

 **Complete formulations of consistent theories of quantum gravity**

This equivalence has led to:

 Complete formulations of consistent theories of quantum gravity

 Solutions of previously unsolved problems in strongly interacting theories of quantum matter in 2 dimensions (without gravity)

Interference of water waves

Quantum Superposition

The double slit experiment

Interference of electrons

Quantum Superposition

The double slit experiment

Which slit
does an
electron
pass
through ?

Interference of electrons

Quantum Superposition

The double slit experiment

Which slit
does an
electron
pass
through ?

No
interference
when you
watch the
electrons

Interference of electrons

Quantum Superposition

The double slit experiment

Which slit
does an electron
pass
through ?

Each
electron
passes
through
both slits !

Interference of electrons

Quantum Superposition

The double slit experiment

Let $|L\rangle$ represent the state with the electron in the left slit

Quantum Superposition

The double slit experiment

Let $|L\rangle$ represent the state with the electron in the left slit

And $|R\rangle$ represents the state with the electron in the right slit

Quantum Superposition

The double slit experiment

Let $|L\rangle$ represent the state with the electron in the left slit

And $|R\rangle$ represents the state with the electron in the right slit

Actual state of the electron is

$$|L\rangle + |R\rangle$$

Black Holes

Objects so massive that light is gravitationally bound to them.

Black Holes

Objects so massive that light is gravitationally bound to them.

In Einstein's theory, the region inside the black hole **horizon** is disconnected from the rest of the universe.

$$\text{Horizon radius } R = \frac{2GM}{c^2}$$

Black Holes + Quantum theory

Around 1974, Bekenstein and Hawking showed that the application of the quantum theory across a black hole horizon led to many astonishing conclusions

Quantum Entanglement across a black hole horizon

Quantum Entanglement across a black hole horizon

Quantum Entanglement across a black hole horizon

Quantum Entanglement across a black hole horizon

Quantum Entanglement across a black hole horizon

There is a non-local quantum entanglement between the inside and outside of a black hole

Quantum Entanglement across a black hole horizon

There is a non-local quantum entanglement between the inside and outside of a black hole

Quantum Entanglement across a black hole horizon

There is a non-local quantum entanglement between the inside and outside of a black hole

This entanglement leads to a black hole temperature (the Hawking temperature) and a black hole entropy (the Bekenstein entropy)

The quantum theory of a black hole in a 3+1-dimensional negatively curved AdS universe is holographically represented by the theory of a quantum critical point in 2+1 dimensions

Question: if you lived in this world, would you think you lived in 2 or 3 spatial dimensions ?

The quantum theory of a black hole in a 3+1-dimensional negatively curved AdS universe is holographically represented by the theory of a quantum critical point in 2+1 dimensions

Question: if you lived in this world, would you think you lived in 2 or 3 spatial dimensions ?

Answer: it depends.....

The quantum theory of a black hole in a 3+1-dimensional negatively curved AdS universe is holographically represented by the theory of a quantum critical point in 2+1 dimensions

Question: if you lived in this world, would you think you lived in 2 or 3 spatial dimensions ?

Answer: for some values of the parameters in the theory, the world would appear 3 dimensional, while for other parameters, it would appear 2 dimensional, and there many theories which would appear “in-between”

The deepest new principle of physics to emerge from string theory is the equivalence between

the quantum theory of gravity in 3 space dimensions

and

a theory of special quantum states of matter (electron, photons, quarks..) without gravity in 2 space dimensions
