ADVANCED STUDY

PHYSICS

HARVARD

Newton showed (1687) that the same laws of motion applied on planetary length scales ( $\sim 1$  trillion meters) and the length scale of an apple tree (1 meter).

Newton showed (1687) that the same laws of motion applied on planetary length scales ( $\sim 1$  trillion meters) and the length scale of an apple tree (1 meter).

**What happens on smaller distances ?**

Quantum theory of electrons,  
one at a time:  
metals and insulators

# Hydrogen atom

$\Rightarrow 10^{-10}$  meters  $\Leftarrow$

The motion of the electron around the proton is *not* described by the same theory as the motion of the planets around the sun.

# Hydrogen atom

$\Rightarrow 10^{-10}$  meters  $\Leftarrow$

The motion of the electron around the proton is *not* described by the same theory as the motion of the planets around the sun.

It is described by the quantum theory of Schrödinger and Heisenberg (1925).

# Other atoms

Period	Group	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	
1		H 1 1s																	He 1 1s

	**	Th 1 5f	Pa 2 5f	U 3 5f	Np 4 5f	Pu 5 5f	Am 6 5f	Cm 7 5f	Bk 8 5f	Cf 9 5f	Es 10 5f	Fm 11 5f	Md 12 5f	No 13 5f	Lr 14 5f					

The periodic table follows from (i) the exclusion principle, and (ii) each electron has 2 spin states  $|\uparrow\rangle$ , and  $|\downarrow\rangle$ .

## Ordinary metals

Ordinary metals are shiny, and they conduct heat and electricity efficiently. Each atom donates electrons which are delocalized throughout the entire crystal

# Copper

Each copper atom donates its outermost electron  
These electrons move freely throughout the crystal and carry current

*Diamond - a very good insulator*

Each carbon atom donates 4 electrons

These electrons occupy filled “bands” and are not able to carry current

Quantum entanglement of  
electron pairs:  
superconductivity

The most remarkable new idea in the quantum theory is the  
*principle of superposition:*  
a physical system can be in a  
superposition of two (or more) distinct states.

**The New York Times**

# Sorry, Einstein. Quantum Study Suggests ‘Spooky Action’ Is Real.

By **JOHN MARKOFF** OCT. 21, 2015

In a landmark study, scientists at Delft University of Technology in the Netherlands reported that they had conducted an experiment that they say proved one of the most fundamental claims of quantum theory — that objects separated by great distance can instantaneously affect each other’s behavior.

Part of the laboratory setup for an experiment at Delft University of Technology, in which two diamonds were set 1.3 kilometers apart, entangled and then shared information.

○ Electron scattering time  $\tau$  in the SYK model

$$\frac{1}{\tau} = \alpha \frac{k_B T}{\hbar}$$

Entangle electrons pairwise randomly

**Complex quantum entanglement in black holes**

# Black Holes

Objects so dense that light is gravitationally bound to them.

Horizon radius  $R = \frac{2GM}{c^2}$

$G$  Newton's constant,  $c$  velocity of light,  $M$  mass of black hole  
For  $M = \text{earth's mass}$ ,  $R \approx 9 \text{ mm}$ !

# Quantum Entanglement across a black hole horizon

# Quantum Entanglement across a black hole horizon

# Quantum Entanglement across a black hole horizon

# Quantum Entanglement across a black hole horizon

There is quantum entanglement between the inside and outside of a black hole

# Quantum Entanglement across a black hole horizon

Hawking (1975) used other arguments to show that black hole horizons have a temperature  
(The entanglement reasoning: to an outside observer, the state of the electron inside the black hole cannot be known, and so the outside electron is in a random state.)

## The Sachdev-Ye-Kitaev (SYK) model

The SYK model has a scale-invariant entanglement structure:  
i.e. electrons are entangled at all distance and time scales

It describes  
certain ***strange metals***

Sachdev, Ye (1993)

# The Sachdev-Ye-Kitaev (SYK) model

The SYK model has a scale-invariant entanglement structure:  
i.e. electrons are entangled at all distance and time scales

In one set of variables, it describes certain ***strange metals***

Sachdev, Ye (1993)

In a ***dual*** set of variables it describes certain ***black holes***
